Meeting ID: Ex. 6 Personal	Privacy (PP)			
Passcode: Ex. 8 Personal Privacy (PP)				
Teleconference Dial-In: Ex. 6 Personal Privacy (PP)				

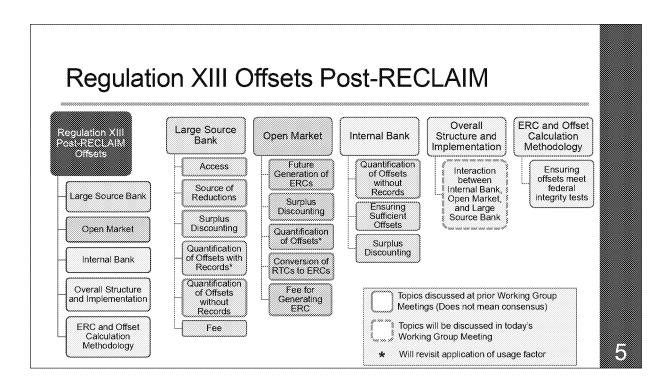

### **Previous Working Group Meeting Summary**

- Capacity Utilization for Quantification of Offsets Without Records
- Generation of ERCs for the Open Market
  - Proposed no interruption in the ability to generate ERCs for the Open Market
- Responses to Regulation XIII Comment Letters
  - Proposed to incorporate federal NSR by reference
  - \* Will not include permit limits for projected actual emissions
- - Proposed a BACT exemption for non-ozone precursor emission increases associated with air pollution control equipment installations to comply with NOx BARCT standards

ED\_005970B\_00000730-00005

Proposed Amended Rule 1304 (PAR 1304)

### Background and Purpose

- Adopted in October 1979 and last amended in June 1996
- Rule 1304 exempts specific sources from the modeling requirement of Rule 1303 (b)(1) and offsetting requirement of Rule 1303 (b)(2)
- Currently, Rule 1304 does not exempt any sources from BACT

### PAR 1304 – Approach and Schedule

- \*Objective is to add a narrow BACT exemption for non-ozone precursor emission increases associated with air pollution control equipment installations to comply with NOx BARCT standards
- Scheduled for a Public Hearing in June 2021 to accompany PR 1109.1
- Provide draft rule language at March Working Group Meeting

## PAR 1304 – BACT Exemption

- Exemption needs to be below major modification thresholds in order to not require major new source review
  - For major sources over 70 tons per year, the major modification thresholds are 15 ton per year for PM10 and 10 tons per year for PM2.5
- Exemption needs to be narrow in order to ensure no backsliding under SB 288

## **BACT Exemption Limitations**

- Projects needed to transition from RECLAIM to command-and-control
- Rules that establishes BARCT emission limits for an ozone precursor
- Non-ozone precursor emission increases
- Projects below the federal NSR thresholds

Additional improvements, upgrades, or capacity increases

Seeking input

Ammonia emissions associated with installation of SCR

## PAR 1304 - Proposed Rule Language

#### (f) BACT Exemptions

A RECLAIM NOx facility or a former RECLAIM NOx facility that is transitioning from a RECLAIM regulatory structure to a command-and-control regulatory structure shall be exempt from the BACT requirement of Rule 1303 (a)(1) for non-ozone precursors, except for ammonia emissions, provided:

- The facility installs or modifies an emission control device solely to comply with South Coast AQMD command-and-control NOx BARCT rules;
- (2) There is no increase in maximum rating or permitted operating schedule of the source:
- (3) There is no increase in the physical or operational design of the existing facility, except for those changes to the design needed for the installation or modification of the emission control idevice itself.
- Emissions from the source, by itself, do not cause an exceedance of any ambient air quality standards; and
- (5) The project does not constitute a federal major modification.

#### Seeking input

Allows replacement as long as there is no increase in facility

#### PAR 1304 – Additional Considerations

Which scenarios will the co-pollutant BACT exemption apply to?

Will the co-pollutant BACT exemption apply to projects with pending applications?

What happens if a PM increase is exempt from BACT, but the facility has an existing PM limit that may not account for the emission increase?

Seeking input

#### **Facility Upgrade Projects**

- Which scenarios will the co-pollutant BACT exemption apply to?
- \* Intent is to allow replacement of sources with variable number of sources as long as there is no increase in total capacity
- Increase will be evaluated under the federal applicability test
- \* Project scenarios that meet the intent (replacement with no increase in total capacity) and used to comply with a NOx BARCT standard will be acceptable:
  - Scenario 1: Facility installs SCR and replaces an existing boiler with a replacement boiler - ACCEPTABLE
  - Scenario 2: Facility installs SCR and replaces two existing small boilers with one large replacement boiler- ACCEPTABLE
  - Scenario 3: Facility installs SCR and replaces an existing boiler with two or more boilers-ACCEPTABLE
  - Scenario 4: Facility installs SCR and replaces two or more boilers with two or more boilers-ACCEPTABLE

### Co-pollutant BACT Exemption for Pending Seeking input **Applications**

- Will the co-pollutant BACT exemption apply to projects with pending applications?
  - \* Pending projects needed to comply with proposed NOx BARCT standard as part of the RECLAIM transition should be eligible
  - Pending projects are those where the application has not been deemed complete prior to rule adoption

Seeking input

### **Existing PM Limits**

- \*What happens if a PM increase is exempt from BACT, but the facility has an existing PM limit that may not account for the emission increase?
  - \* Facility will receive a new PM limit equal to the current limit plus the increment from the installation of the emission control technique

# Overall Structure and Implementation for Offsets

#### Offsets for Minor and Major Sources

- Based on discussions with U.S. EPA, Major Sources can only use offsets generated from emission decreases with supporting emissions data
- Minor Sources can use a quantification approach based on a percentage of the Permit to Emit or offsets generated from emission decreases with supporting data
- \*Instead of a Large Source Bank, staff is proposing a:
  - Major Source Bank that only Major Sources can access
  - Minor Source Bank that only Minor Sources can access
- Proposed Minor Source Bank and Major Source Bank will be managed by South Coast AQMD and provide NOx, SOx, and PM10 offsets

## Federal NSR Major Source

- Major Source under Federal NSR is
  - A new Major Polluting Facility¹; and
  - \* A Major Modification<sup>2</sup> at a Major Polluting Facility
- If a Minor Polluting Facility has a modification that exceeds the Major Polluting Facility thresholds, the facility would become a Major Polluting Facility
- \* Federal Major Source for nonattainment NSR is pollutant specific

	Federal Major Se	ource
Pollstent	Major Polluting Facility	Major Modification
NOx	≥10 tons per year	≥0.5 pound per day
SOx	≥70 tons per year	≥40 tons per year
PM10	≥70 tons per year	≥15 tons per year

<sup>&</sup>lt;sup>1</sup> Federal NSR uses Major Stationary Source as defined in 40 CFR 51.165(a)(1)(iv)

<sup>&</sup>lt;sup>2</sup> Major Modification is defined in 40 CFR 51.165(a)(1)(v)

## Federal NSR Major Source (Continued)

- \* A project at a **Minor Polluting Facility**, can be a Major Source if the permitting project **exceeds the Major Polluting Facility Thresholds**
- A project at a Major Polluting Facility, will be a Minor Source if the permitting project is less than the Major Modification Significant Emissions Thresholds

Rodiliy	Modification Potential to Emit	
	Less than Major Polluting Facility Thresholds	Minor Source
Minor Polluting Facility	Greater than or equal to Major Polluting Facility Thresholds	Major Source
Major Polluting Facility	Less than Major Modification Significant Emissions Thresholds	Minor Source
	Greater than or equal to Major Modification Significant Emissions Thresholds	Major Source

### Access to Offsets Managed by South Coast AQMD

- ▼ Eligible Minor and Major Sources will access Internal Bank I-ERCs:
  - \* Projects at a Minor or Major Polluting Facility eligible through:
    - \* Priority Reserve (Rule 1309.1)
      - « Essential Public Services
    - Exempt from offsetting (Rule 1304)
      - » Facilities w/ PTE < 4 tons per year
      - Facility w/ PTE ≥ 4 tons per year listed under Rule 1304 categories
- Only Minor Sources will access Minor Source Bank Mi-ERCs:
  - Projects that are Minor Sources at a Minor or Major Polluting Facility that are not eligible to use I-ERCs
- Only Major Sources will access Major Source Bank Ma-ERCs:
  - \* Projects not eligible to use I-ERCs or Mi-ERCs that are:
    - A new Major Polluting Facility
    - \* Modifications that are Major Sources at a Minor or Major Polluting Facility

#### Interaction between Open Market, Internal Bank, Minor Source Bank, and Major Source Bank

#### Access:

Usage fee:

market value

• ERC cost based on

Available to all sources

#### Access:

- Sources exempt from offsetting (Rule 1304)
- Facilities w/ PTE <4 tpy
- Priority Reserve (Rule 1309.1)
- Essential Public Services

#### Usage fee:

No Fee

#### PROPOSED

#### Access:

- Minor sources not eligible to use I-ERCs
- Minor modifications at major polluting facilities

#### Usage fee:

• Fee to be determined

#### PROPOSED

#### Access:

 Major sources not eligible to use I-ERCs or Mi-ERCs

#### Usage fee:

• Fee to be determined

### Seeding for the Proposed Banks

- Since there is a sufficient supply of offsets in the Internal Bank, staff is proposing to temporarily stop I-ERCs into the Internal Bank
- \* All new emission decreases from orphan reductions or shutdowns will be used to seed either the Minor Source Bank or the Major Source Bank
- Offsets will be directed based on how they were quantified
  - Orphan reductions without records will go to the Minor Source Bank
  - Orphan reductions with supporting data will go to the Major Source Bank
- Offsets for the Major Source Bank can be generated from emission decreases with supporting data from both Minor and Major Sources

- Once a sufficient supply of Ma-ERCs are generated (after the first 5 years) deposits into the Internal Bank will resume
  - ▼ Offsets without supporting data will be split between the Minor Source Bank and the Internal Bank
  - \* All emission decreases with supporting emissions data will be directed to the Major Source Bank
- \* After the seeding period, emission decreases with supporting data could be used for any bank as needed
- \* Amounts directed to each bank will be assessed periodically to ensure offset availability

Bank Managed by South Coast AGMD	First Five Years	After First Five Years
Internal Bank (Eligible Minor and Major Sources)	Suspend deposits to direct all orphan reductions without records to the Large Source Bank for minor sources	Use a portion of the orphan reductions without records
Minor Source Bank (Minor Sources only)	Use all orphan reductions without records	Use a portion of the orphan reductions without records
Major Source Bank (Major Sources only)	Use all orphan reductions with records	

#### Key Features of the Open Market, Internal Bank, Minor Source Bank, and Major Source Bank Official **ERCs** I-ERCs Mi-ERCs Ma-ERCs Name VOC, NOx, SOx, and VOC, NOx, SOx, and Pollutants NOx, SOx, and PM10 NOx, SOx, and PM10 PM10 PM10 Sources exempt from Major sources not offsetting (Rule 1304) Minor sources not eligible to use I-ERCs or Access All sources Priority Reserve eligible to use I-ERCs Mi-ERCs (1309.1)■\$4,800 for non-Title V Generation No fee No fee No fee m ■\$6,000 for Title V Use Fees Market price of ERC No fee Fee (to be established) Fee (to be established) Provided by South Coast Open Market w/ buyers Provided by South Coast Provided by South Coast Officers are & sellers AQMD AQMD AQMD Accessed How Offset Only orphan reductions

### **Working Group Meeting Summary**

- Proposed Amended Rule 1304 Rule Development
  - \* Adding a narrow BACT exemption for non-ozone precursor emission increases associated with air pollution control equipment installations to comply with NOx BARCT standards
- Overall Structure and Implementation for Offsets
  - Offsets for Minor and Major Sources
  - Seeding for the proposed banks

### **Next Steps**

- Continue rule development for PAR 1304
  - Public Workshop will be held in mid-March
  - ▶ Public Hearing scheduled for June 4, 2021 to accompany PR 1109.1
- Continue working on key aspects for the proposed Minor and Major Source Banks
- \*Staff will continue working with U.S. EPA, CARB, and stakeholders to resolve NSR issues
